Style 300

The Protector Style 300 safety helmet is stylish and comfortable and weighs just 310 grammes. Manufactured from high-density polyethylene, the helmet has an eight point terylene head gear. The helmet is very well balanced when worn, maximising both comfort and protection for the wearer.

The distinctive contoured helmet shape has been specifically designed to be used with hearing protection. These features, in conjunction with the provision of a rain gutter, make Style 300 ideally suited for heavy engineering and construction applications in exposed environments. A comprehensive branding service is also available.
